BUILDING BETTER HEALTH

The Cancer Care Center

at Logansport Memorial Hospital

100% Personalized Care

At the Cancer Care Center, we understand cancer affects each patient in very different ways. That's why our team constructs a highly personalized plan of care for every patient that includes:

- Advanced treatment options, including surgery, chemotherapy and radiation
- Hematology for blood disorders
- Physical/occupational therapy education
- Leading diagnostic imaging and treatment technology
- Specialized dietary education
- Access to resources/clinical trials through affiliations
- Consistent care from one team of board-certified experts

Making Cancer Care Convenient

One goal of the Cancer Care Center is to eliminate as many barriers as possible to accessing care, so that patients can put all their energy into getting well. Our focus on convenience has led to the development of on-site services and amenities that include:

- Full-service laboratory
- Pharmacy services
- Free valet parking
- Flexible scheduling options
- One location for surgical consultation/follow-up, chemotherapy and radiation

Leading-Edge Treatments

Surgical Oncology

Our board-certified surgical team uses the latest in minimally invasive and laparoscopic surgery to remove cancerous tissue, leading to smaller incisions, less discomfort and faster recovery.

Chemotherapy

Some treatment plans may require chemotherapy, including IV treatments, injections and blood transfusions. Our infusion care is delivered by specially trained oncology nurses who go to great lengths to make patients as comfortable as possible, with amenities that include:

- Free wi-fi and iPads at each station
- Complimentary refreshments
- Fully adjustable light, temperature and sound controls and optional privacy dividers at every station
- Spacious treatment area with room for a support person

Radiation Oncology

Using state-of-the-art radiation — including Varian TrueBeam® and Varian RapidArc® — we can deliver precise doses of radiation with pinpoint accuracy, which targets the cancer without affecting healthy tissue.
